■ API Endpoints

2. Get Fact by ID

Method: GET /api/facts/:id
Description: Fetch a single fact by its unique ID.
Parameters:
- id (integer, required): ID of the fact.
Example: GET /api/facts/5
Errors:
- 400 → invalid ID
- 404 → fact not found

3. Get Facts with Filters

Method: GET /api/facts
Description: Fetch facts with optional filters and fuzzy matching.
Parameters:
- neighborhood → fuzzy match on neighborhood name
- category → fuzzy match on fact category
- zipcode → exact U.S. postal code
- limit → number of facts to return (1–100)
- random → true or false (randomizes selection)
Examples:
- GET /api/facts?zipcode=11372
- GET /api/facts?neighborhood=astor&limit;=2
- GET /api/facts?category=history&random;=true&limit;=1
Response:
```
{
"fact_id": 12,
"neighborhood": "Jackson Heights",
"category": "Culture",
"zipcode": "11372",
"fact": "Jackson Heights is one of the most linguistically diverse neighborhoods in the
world."
}
```
